
1080 IMPREGNATED OATS FOR WILD DOGS

The Bait Production Unit (BPU) at Forrestfield in Western Australia has ceased production of poison products. Most BPU products are still available to Western Australian (WA) landholders through a state-wide network of S7 poison retailers, though stocks will gradually run down.

All remaining stock of 1080 Impregnated Oats (Wild Dog Control) has now been sold. 1080 Impregnated Oats (Wild Dog Control) are being placed out to tender for another interested party to manufacture and sell. It is anticipated that 1080 Impregnated Oats (Wild Dog Control) will become available again to WA landholders in 2013.

1080 Impregnated Oats (Wild Dog Control) may not be available until 2013 as it will take time:

1. To select an interested party;
2. For the selected party to get authorisation from the Australian Pesticides and Veterinary Medicine Authority (APVMA) to manufacture and sell 1080 Impregnated Oats (Wild Dog Control);
3. For the selected party to start their manufacturing process.

In order to control wild dogs while 1080 Impregnated Oats (Wild Dog Control) are not available the following products may be considered by landholders.

Landholders in pastoral areas can:

1. Use commercial bait products to control wild dogs. Two bait products are registered by the APVMA for use on wild dogs in WA. They are: De-K9 1080 Wild Dog Bait produced by PAKS National Pty Ltd (De-K9); and Doggone Wild Dog Bait produced by Animal Control Technologies Australia Pty Ltd (Doggone).
2. Organise to make dried meat baits, injected with 1080 by: authorised landholders (pastoral injectors); or where available an authorised Licensed Pest Management Technician.

Landholders in agricultural areas can:

1. Use commercial bait products to control wild dogs. Two bait products are registered by the APVMA for use on wild dogs in WA. They are De-K9; and Doggone.
2. Organise to make dried meat baits, injected with 1080 by: local DAFWA biosecurity officers for a fee for service, or an authorised Licensed Pest Management Technician.

Contact your local DAFWA office for information.
